FUTURA

Global South

PR & Communications Strategy

Prepared by Digital24 | Confidential | 2026

01 THE GLOBAL SOUTH OPPORTUNITY

Six billion people live in markets that the existing global financial system was not built for. They send money across borders through channels that charge them between three and seven percent per transaction. They hold savings in currencies that lose value faster than they can earn. They cannot verify their identity digitally, access credit, or participate in global commerce on equal terms. They are underserved by design, because the infrastructure that runs global finance was built by and for a different set of participants.

The Global South is home to the majority of the world's young people, the fastest-growing mobile-connected populations on the planet, and some of the most significant remittance flows in the global economy. It is also home to the most significant opportunity in digital finance, because the frameworks that will govern this space in these markets are still being written.

The window is narrow. Regulatory frameworks that are open today will close as governments establish positions. Companies that engage constructively now, as infrastructure builders rather than market entrants seeking extraction, will shape the frameworks that govern this space for a generation.

> ***The question is not whether digital infrastructure will transform the Global South. It is who builds it, and whether they build it right.***

Three things have converged to create the current window.

First, regulatory bodies across the Global South are actively seeking compliant, credible partners to help them develop frameworks rather than simply applying rules to companies that have already arrived. The regulatory conversation in these markets is collaborative in a way it is no longer possible to achieve in the US or EU.

Second, the failure of speculative crypto activity has cleared the way for a utility-focused infrastructure. Markets that watched Bitcoin volatility, exchange collapses, and speculative excess have not abandoned digital assets, they have become more selective about what they will accept. Compliance-first & utility-first companies have a credibility advantage.

Third, remittance flows reaching historic highs across the Global South have created acute daily demand for a better cross-border payment infrastructure.

02 FUTURA'S STRATEGIC POSITION

Futura’s product suite covers the full stack of what an individual in an emerging market needs to participate in the digital economy: a wallet, an exchange, a card, KYC and digital identity infrastructure, a VPN, encrypted communications, and the underlying blockchain. These are products designed for the freelancer in Karachi who cannot get paid reliably from international clients. The family in San Salvador waiting for a remittance to arrive. The small business owner in Lagos who cannot access credit because there is no verifiable record of their financial history.

Futura's founding principle is compliance-first. This is a deliberate strategic choice, because the only version of a digital infrastructure that delivers lasting impact in the Global South is the version that works with governments and regulators rather than around them. Infrastructure that operates in the shadows cannot scale. Infrastructure that is regulated, trusted, and aligned with national development goals can.

> ***Futura is a compliance-first infrastructure company that uses blockchain as the enabling layer.***

The master narrative

For Global Media & Institutional Audiences

Futura is a licensed, compliant digital infrastructure company building the financial layer for the six billion people in the Global South. We are already a regulated operator in El Salvador, home to the world's most advanced digital asset regulatory framework. We are working actively with governments including Pakistan to help shape the frameworks that will govern this space.

For Regulatory & Government Audiences

Futura brings compliance-by-design digital infrastructure to markets that are building their regulatory frameworks now. Our engagement with regulators is not transactional. We are here to contribute to the frameworks that will shape digital finance in your market, share what we have learned from operating in El Salvador under the world's leading digital asset regulatory framework, and build infrastructure that serves your population and supports your national development goals.

For Consumer & Community Audiences

Futura gives you the financial tools you have been needing. A wallet that works across borders. A card you can use anywhere. An identity layer that is yours, not a bank's. Payments that cost what they should cost, not what the current system charges you. Built on blockchain. Built for compliance. Built for you.

Narrative pillars

Compliance First	Utility First	Global South Focus	Ready to Trade
• Licensed before operating • Regulators as partners • Framework contributor • AML/KYC by design	• No speculative positioning • $FUTURA is utility only • Real products for real needs • Infrastructure not investment	• Built for excluded markets • Remittance opportunity • Financial inclusion • Young digital populations	• CNAD licensing underway • Operational credibility • Global South proof point • Not waiting for approval

Building the Global South narrative: a workstream above both markets

The Global South narrative is not a framing device applied to two country strategies. It is a communications stream, running above and across El Salvador and Pakistan simultaneously. Its purpose is to establish Futura's identity and positioning with audiences who are not yet in either active market but will matter enormously as the company expands.

The infrastructure, remittance, and financial inclusion conversation is happening at the global level, not just within individual markets. International development institutions, global media, cross-border fintech conferences, and policy forums are all actively discussing the question of what compliant digital infrastructure for the Global South should look like. Futura has a distinct and credible point of view on that question, and it should be contributing to that conversation directly and consistently.

This stream has three components:

First, a sustained thought leadership programme targeting global financial and technology media, positioning Futura's leadership as authoritative voices on digital infrastructure, financial inclusion, and regulatory development across emerging markets.

Second, a presence at the international forums and conferences where the Global South digital economy conversation happens, including events focused on fintech in emerging markets, cross-border payments, and digital asset regulation.

Third, a content library, built across op-eds, interviews, and published commentary, that collectively tells the story of what Futura is building and why it matters, in a way that speaks to any Global South market, not just El Salvador or Pakistan.

> ***Every piece of content produced for El Salvador or Pakistan should also serve the Global South narrative. And the Global South narrative should generate content that neither market could produce alone.***

03 THE TWO-MARKET ARCHITECTURE

Futura is building across two markets. They have different roles, different regulatory contexts, and different activity profiles. El Salvador leads: it is the licensed base that gives the Global South narrative its operational credibility. Pakistan follows, re-engaging from a stronger position once that credibility is established

.

EL SALVADOR *The Licensed Base*	PAKISTAN *The Market Being Shaped*
• World's number one ranked digital asset regulatory framework	• Regulatory framework actively forming, Futura helping shape it
• CNAD licence: fast, credible, internationally recognised	• PVARA, SECP, SBP, and Ministry of IT all engaged constructively
• Zero corporate tax on digital asset activities	• 220 million population, one of the world's largest remittance economies
• Provides immediate operational credibility and proof of licence	• Positions Futura as an infrastructure builder, not a market entrant
• Anchors the Global South narrative with regulatory legitimacy	• 25% of narrative weight in global communications
• Primary activity: licence acquisition and CNAD relationship	• Primary activity: regulator engagement and ecosystem building

The power of the two-market architecture is the contrast between the two countries. El Salvador and Pakistan represent opposite ends of the Global South regulatory spectrum. El Salvador has a functioning, internationally recognised framework and a regulated ecosystem already. Pakistan is a market where the framework is still forming and where Futura is engaged at the regulatory level to help shape it.

Together they make a claim that no single-market strategy can make: Futura is not just a company that operates where regulations permit. It is a company that operates where regulations exist and helps build them where they do not. That is the definition of a long-term infrastructure builder, and it is a fundamentally different story from every other company in this space.

> ***Licensed in El Salvador. Shaping regulation in Pakistan. Futura is a Global South infrastructure company.***

04 THE COMMUNICATIONS APPROACH

The Global South strategy operates across three distinct audiences, each requiring a different tone, channel mix, and content approach. All three are active throughout the programme, but the weighting shifts significantly by phase. In the early months, the global institutional and media audience carries the most weight as the El Salvador narrative is established. Pakistani audiences reactivate from L-2 as the El Salvador credibility provides the foundation for re-engagement.

Audience 1: Global institutional and media

This is the primary audience for the El Salvador narrative. The global Bitcoin and crypto media ecosystem covers El Salvador extensively. CoinDesk, CoinTelegraph, Bitcoin Magazine, Decrypt, Reuters, and Bloomberg all have established El Salvador beats. A CNAD licence announcement from a company with Futura's positioning is automatically a credible international story. This audience is also the one that shapes how institutional partners, investors, and regulators in other markets perceive Futura.

Primary channels

Global crypto and financial media. Wire services. International podcast circuit. English-language content.

Core message

Futura is a licensed, compliant Global South infrastructure operator. El Salvador is the foundation. The world is the market.

Audience 2: Pakistani regulators, media, and ecosystem

Regulatory credibility in Pakistan is built through relationships, demonstrated commitment, and a track record of constructive engagement with government and civil society. The El Salvador licence provides an important proof point for this audience: Futura is not a company making promises about future compliance. It is already a licensed operator under one of the world's most rigorous digital asset frameworks. That changes the nature of the conversation with Pakistani regulatory contacts from an introductory pitch to a peer-level discussion between an established operator and a regulator building its own framework.

Primary channels

Direct regulatory engagement. Pakistani financial and technology press. Podcast appearances. Ecosystem partnerships. Op-ed placements.

Core message

Futura is already a regulated operator. It is in Pakistan because it believes in Pakistan's potential and wants to help build the framework that will unlock it.

Audience 3: The broader Global South

The third audience is the one that gives Futura's story its full strategic weight. It includes the regulators, fintech communities, media, and development institutions across Africa, Southeast Asia, South Asia beyond Pakistan, the Middle East, and the Caribbean who are watching what is being built in El Salvador and Pakistan and drawing conclusions about what is possible in their own markets.

This audience does not need to be targeted market by market at this stage. It is reached through the global media coverage of El Salvador, through the international forums where Futura's leadership contributes, and through the thought leadership content that addresses the Global South's shared challenges. Every major piece of coverage of Futura's El Salvador licence reaches this audience, including every op-ed on financial inclusion or cross-border payment infrastructure. The investment in this audience now builds the pipeline of credibility that makes every subsequent market entry faster and easier.

Primary channels

International development media. Global fintech and crypto press. Cross-border payments and financial inclusion forums. English and Spanish-language content targeting emerging market audiences.

Core message

Futura is building the financial infrastructure layer that the Global South needs. El Salvador is the proof it can be done compliantly. Pakistan is the proof it can be done collaboratively. The model is designed to be replicated across every market that shares these needs.

Tone and content principles

Utility.
Every piece of content, every media appearance, and every regulatory communication reinforces that Futura is an infrastructure company. The $FUTURA token is a utility mechanism, not an investment vehicle. This distinction must be explicit and consistent, because the media and regulatory environment will look for any sign of speculative positioning.

Compliance as a differentiator.
Most companies in this space discuss compliance as something they have had to accommodate. Futura should discuss it as the reason they exist. Being compliant is not limiting what Futura can do. It is exactly what Futura was built to do.

Government partnership.
Futura engages with regulators as a partner and contributor to framework development. The El Salvador licence demonstrates that Futura can operate independently within a regulated framework. The Pakistan engagement demonstrates that Futura contributes to frameworks. Both positions are important and both need to be communicated clearly.

Earned credibility.
Futura demonstrates trustworthiness through the quality of its regulatory engagement, the rigour of its compliance infrastructure, and the calibre of the partners and institutions it works with. Every media placement, regulatory submission, and partnership announcement is a credibility signal.

05 INTEGRATED ACTIVITY OVERVIEW

The two market-specific activity plans that accompany this strategy document contain the detailed month-by-month activity for El Salvador and Pakistan respectively. This section provides the integrated view: how the two markets work together within a single programme, with one market providing the licensed foundation, the other demonstrating the broader Global South commitment.

How the markets reinforce each other

Activity	How it serves both markets
El Salvador CNAD licence obtained	Immediately strengthens Futura's regulatory credibility in Pakistan. The conversation shifts from 'we intend to be compliant' to 'we are already licensed under the world's leading framework.'
Pakistan regulatory engagement	Demonstrates to global media and institutional audiences that Futura is not just a licensing vehicle but an active builder of digital infrastructure frameworks across the Global South.
International media coverage of El Salvador launch	Generates awareness of Futura's Global South mission across the institutional and crypto audience, creating a backdrop against which Pakistan activity lands with greater credibility.
Pakistani op-eds and thought leadership	Establishes Futura's voice on financial inclusion, remittances, and infrastructure in a major Global South market. This content is repurposed and adapted for the Latin American and broader regional audience.
Ecosystem partnerships in Pakistan	Provides authentic community-level proof of Futura's commitment to markets it operates in. Amplified internationally as evidence that Futura is building for real populations, not just regulatory arbitrage.

Regulatory milestone announcements	In either market, any regulatory milestone is a global story. CNAD licence announced in El Salvador. PVARA or SECP engagement milestones announced in Pakistan. Both feed the same Global South narrative arc.

How to read the programme phases
This strategy uses an L-based timelin. L is the expected date of CNAD licence confirmation. L-3, L-2, and L-1 refer to the three months preceding that date. The detailed activity plans for El Salvador and Pakistan map all activities to this timeline. Once Futura's legal team confirms the expected approval date, every phase has a fixed calendar position.

Programme sequencing

The programme is El Salvador-led. This is a deliberate strategic choice. Futura has encountered a regulatory gap in Pakistan. Pushing Pakistan activity hard before the El Salvador licence is in place means entering that re-engagement as an applicant seeking permission. Entering it as a licensed operator under the world's number one ranked digital asset framework is a fundamentally different conversation.

L-3 front-loads the Global South and El Salvador narrative. Pakistan runs at foundation level only: internal groundwork, relationship maintenance, no public-facing regulatory pressure. By L-2, the El Salvador credibility is building and Pakistan can reactivate from a stronger position. By L-1, the CNAD licence is obtained or near completion, the global announcement lands, and the Islamabad visit happens behind the full weight of a licensed, internationally credible operator. The sequencing is designed to make every Pakistan conversation easier than it would have been had both tracks run at equal intensity from day one.

Phase	El Salvador	Pakistan
L-3	PRIMARY FOCUS. CNAD licence application filed. Regulatory relationship with CNAD established. Global South narrative framework finalised and approved. International media infrastructure prepared. Futura media briefing guide completed.	FOUNDATION ONLY. Internal regulatory mapping. Relationship maintenance with existing contacts. No public-facing regulatory pressure and no new outreach. Pakistan activity pauses at the surface while the El Salvador credibility is built underneath it.
L-2	CNAD licence progresses. Engagement deepens with CNAD. First international media moments around El Salvador story and Futura's Global South positioning. Spanish-language content track initiated for Latin American audience.	CAUTIOUS REACTIVATION. Pakistan re-engagement begins with El Salvador credibility behind it. First media placements. Ecosystem partnership outreach resumes. Regulatory introductions initiated across PVARA, SECP, SBP, and Ministry of IT. The re-entry is a relaunch, not a reset.
L-1	CNAD licence obtained or in final stage. Global media announcement of El Salvador licence. This is the single most important communications moment of the three-month programme.	FULL ACTIVATION. Islamabad visit proceeds with Futura arriving as a licensed operator, not an applicant. All four regulatory bodies met in person. Influencer activation. Community and waitlist building. The contrast between the two markets is now fully realised.

Beyond the first two markets

El Salvador and Pakistan are the first phase. The Global South narrative only carries its full weight if it is understood, from the outset, to be describing a model that is designed to be replicated, not a two-country story with a large label attached.

Every activity in this programme serves two purposes simultaneously. It delivers results in the market where it happens, and it builds the evidence base that makes the next market faster, cheaper, and more credible to enter. The CNAD licence obtained in El Salvador becomes the proof point that opens the regulatory

conversation in Ghana, Kenya, Vietnam, or wherever Futura goes next. The ecosystem partnerships built in Pakistan become the template for community engagement in Bangladesh or Nigeria. The thought leadership content produced for either market becomes the foundation of a global library that speaks to any emerging market audience.

This programme should be designed and executed with that forward view in mind. Digital24's reporting will track not just the results within each active market but the Global South narrative indicators that signal whether Futura is building the kind of international credibility that unlocks subsequent markets. Engagement from regulators and institutions in markets not yet active. Inbound interest from potential partners in new territories.

What success looks like

L-3	L-2	L-1
• CNAD application filed and accepted • Global South narrative framework complete and approved • Futura media briefing guide signed off • International media infrastructure prepared • Pakistan internal regulatory mapping complete • Pakistan relationship maintenance active, no public-facing pressure	• CNAD licence progressing • First international media moments around El Salvador story • Pakistan re-engagement initiated from stronger position • First Pakistan op-ed placed • Ecosystem partnership outreach resumed in Pakistan • Regulatory introductions underway across all four Pakistani bodies	• El Salvador CNAD licence obtained and announced globally • Islamabad visit complete. Futura arrives as licensed operator • All four Pakistani regulatory bodies met in person • First international media coverage of Global South position • Influencer engagement confirmed in Pakistan • Quarterly PR monitoring report delivered across both markets
