Futura

El Salvador Activity Plan

3 Months | Prepared by Digital24 | Confidential

This plan covers Digital24's activity in El Salvador for the first three months of the Futura Global South programme. It sits within the overarching Global South PR & Communications Strategy and operates in parallel with the Pakistan Activity Plan.

OVERVIEW

El Salvador is Futura's licensed base. Futura's legal team leads the CNAD licence application process. Digital24's role in this market is to ensure that everything happening on the communications side is aligned with what the legal team is doing on the regulatory side, and to build the narrative and media infrastructure that makes the licence announcement a meaningful international moment rather than a procedural filing.

This plan is structured on the confirmed basis that El Salvador is Futura's licensed base, not an active consumer market. Digital24's role is communications, narrative, and project coordination in support of Futura's legal team through the CNAD licensing process.

The El Salvador plan is the most important piece of work in L-3 of the Global South programme. Pakistan activity runs at foundation level only in L-3 precisely because the El Salvador licence is the credibility asset that makes every subsequent Pakistan conversation more productive.

How to read this plan

This plan is structured around the expected licence approval date. L refers to the date of CNAD licence confirmation. The three phases are L-3, L-2, and L-1, meaning three months, two months, and one month before that confirmation date respectively.

Futura's legal team confirms the expected CNAD licence approval date. That date becomes L.

THE FOUR TRACKS

Track 1	Track 2	Track 3	Track 4
Regulatory & Licensing Futura's legal team leads the CNAD application. Digital24's role is project coordination, communications alignment, and ensuring the licence announcement is ready to execute the moment the licence is confirmed.	**Narrative & Thought Leadership** Building Futura's voice in international media as a licensed Global South infrastructure operator.	**Media & Stakeholder Relations** International media briefings, the licence announcement, and key stakeholder relationships in El Salvador.	**Global South Amplification** Cross-market content that uses El Salvador as the proof point for the broader Global South narrative.

L-3: FOUNDATION PHASE

Three months before expected licence approval: preparation, infrastructure, and legal clearance gate

The El Salvador licence application is filed, the CNAD relationship is established, and the Global South narrative framework is finalised and approved. Pakistan runs at foundation level only this month. Every hour invested in El Salvador in L-3 is an investment in making Pakistan more productive from L-2 onwards.

Track 1: Regulatory & Licensing

Activity	Owner	Output / Deliverable
Digital24's role is to ensure the communications positioning around the licence application is consistent and well-prepared, not to lead the legal process. Futura's legal department, supported by local Salvadoran counsel where needed, leads the application.	Futura Legal	Licence category confirmed. Application route agreed between Futura legal and local counsel.
Coordinate the communications inputs required for the CNAD application. The application itself is prepared by Futura's legal team. Digital24 contributes the communications-facing components: the description of Futura's mission and Global South positioning, the public-facing framing of the business plan narrative, and any materials that describe how Futura intends to communicate its activities in El Salvador.	Digital24 / Futura	Communications inputs delivered to Futura legal team for inclusion in the application package.
Track the CNAD application timeline and ensure no communications activity conflicts with the application process. The Global South narrative, social media content, and media briefings must all be coordinated with what Futura's legal team has submitted or intends to submit to CNAD. Digital24 maintains a shared timeline with Futura legal to ensure alignment.	Digital24 / Futura Legal	Shared communications and legal timeline established. No conflicts identified.
Research CNAD's public profile and stated priorities to inform how Digital24 positions Futura in all communications materials. Understanding CNAd President, Juan Carlos Reyes' stated vision for El Salvador's digital asset ecosystem ensures that all of Digital24's narrative work is aligned with what CNAD publicly values in the companies it licences.	Digital24	CNAD positioning research complete. Findings shared with Futura and incorporated into communications materials.

Track 2: Narrative & Thought Leadership

Activity	Owner	Output / Deliverable
Futura briefing session with Digital24 content team. Capture voice, key messages, approved framing across all narrative pillars, and the boundaries of what can and cannot be said publicly at this stage of the licence process. Futura's legal team defines what Digital24 can publish before the licence is confirmed and what must be held until after. Produce the Futura Media Briefing & Voice Guide.	Digital24 / Futura	Futura Media Briefing & Voice Guide signed off. Legal clearance gate documented. Shared with Pakistan content team.
Draft the Global South positioning statement for internal approval. A concise statement of Futura's mission, its El Salvador licensing rationale, and its Global South vision. This document is held internally until Futura legal confirms it is safe to	Digital24	Global South positioning statement drafted and submitted to Futura legal for clearance.

publish. It forms the foundation from which all press releases, op-eds, and media briefings.		
Build the international media target list. Identify primary and secondary journalist contacts at CoinDesk, CoinTelegraph, Bitcoin Magazine, Decrypt, Reuters, Bloomberg, and international fintech publications. No outreach to journalists this month until Futura legal confirms what can be discussed publicly.	Digital24	International media target list with journalist contacts. Held for use in L-2 once legal clearance is confirmed.
Draft the licence announcement press release and full media kit. Written in advance and held for release the moment the CNAD licence is confirmed. Two press release versions: full wire distribution and shorter social amplification.	Digital24	Licence announcement press release and media kit drafted, legally cleared, and held for release.
Build the Spanish-language media target list. Identify crypto and fintech publications publishing in Spanish that cover El Salvador and the broader Latin American digital economy. Preparation activity only.	Digital24	Spanish-language media target list produced and held.
Draft the first Global South thought leadership piece. Long-form article positioning Futura's leadership as a voice on digital infrastructure for emerging markets. Angle: why the Global South needs compliance-first infrastructure, not speculative crypto. Drafted and submitted to Futura for approval this month.	Digital24	First thought leadership piece drafted and submitted for Futura approval. Publication timing subject to legal clearance.

Pakistan Plan Connection

The Futura Media Briefing & Voice Guide produced in this track governs all content produced in the Pakistan plan. Consistency of voice, framing, and approved language across both markets is non-negotiable.

Track 3: Media & Stakeholder Relations

Activity	Owner	Output / Deliverable
Digital24 builds the journalist relationship strategy: which journalists to approach, in what order, with what framing, and what the off-the-record briefing will cover.	Digital24	Journalist outreach strategy prepared.
Assess the Juan Carlos Reyes and CNAD media engagement opportunity. Juan Carlos Reyes is the most internationally visible digital asset regulator in the world. A relationship with him is a media and credibility asset. Digital24 identifies the most appropriate way to engage given the licence application is in progress, and advises Futura on timing and approach.	Digital24	CNAD engagement strategy confirmed. Approach to Juan Carlos Reyes agreed with Futura and Futura legal.
Map the El Salvador Bitcoin and crypto stakeholder community. Identify the key voices, organisations, and events that Futura should be aware of. This includes Max Keiser and Stacy Herbert's sphere of influence, the Bitcoin Beach community at El Zonte, and the expat crypto community in San Salvador.	Digital24	El Salvador stakeholder map produced.

Track 4: Global South Amplification

Activity	Owner	Output / Deliverable
Establish Futura's LinkedIn and X accounts and prepare the content calendar for L-3 to L-1. The accounts are set up and the content is drafted and approved this month.	Digital24 / Futura Legal	Social accounts established. Content calendar and first posts drafted and approved. Publication timing subject to legal clearance.
Identify two to three international forums or events where Futura's representative could contribute as a speaker or panellist on Global South digital infrastructure, financial inclusion, or compliant blockchain development. Assess suitability and prepare outreach materials.	Digital24	Forum and event shortlist produced. Outreach materials prepared.

Pakistan Plan Connection

The Global South thought leadership content produced in this track feeds directly into the Pakistan narrative. Once approved, it is adapted for Pakistani financial and technology media as part of the Pakistan plan's Track 2 media placements from L-2 onwards.

L-3: Priority Outputs
• Communications inputs delivered to Futura legal for inclusion in application package
• Shared communications and legal timeline established
• Legal clearance gate defined: what Digital24 can publish before the licence is confirmed
• Global South positioning statement drafted and submitted to Futura legal for clearance
• Licence announcement press release and media kit drafted, legally cleared, and held
• International and Spanish-language media target lists built and held
• Journalist outreach strategy prepared, outreach held until clearance confirmed
• El Salvador stakeholder map produced
• Social accounts established, content drafted, publication timing subject to legal clearance
• First Global South thought leadership piece drafted and submitted for approval

L-2: ACTIVATION PHASE

Two months before expected licence approval: public-facing communications begin, Pakistan reactivates

The legal clearance gate established should now be resolved: Futura's legal team has confirmed what can be said publicly while the CNAD application is in progress, and the communications programme activates accordingly. Journalist briefings begin. Social content publishes. The first thought leadership piece goes to media. In parallel, the CNAD application is progressing and Pakistan reactivates from a materially stronger position, with Futura presenting as a company with an active licence application under the world's leading digital asset regulatory framework.

Track 1: Regulatory & Licensing

Activity	Owner	Output / Deliverable
Track CNAD application progress through Futura's legal team. Digital24 maintains a shared timeline and flags any milestone that has communications implications. The communications programme adjusts in real time to the regulatory process.	Digital24 / Futura Legal	Application timeline current. Any communications-relevant developments flagged and actioned.
Brief Digital24's content team on the compliance boundaries the CNAD application creates. There are things Futura cannot say publicly while an application is in progress. Digital24 works with Futura legal to understand those boundaries and ensure all content produced in Tracks 2, 3, and 4 this month stays within them.	Digital24 / Futura Legal	Compliance content boundaries documented and distributed to Digital24 content team.

Track 2: Narrative & Thought Leadership

Activity	Owner	Output / Deliverable
First international media placement. The Global South thought leadership piece is submitted to target international media. Digital24 manages the submission, follows up with editors, and handles any editorial requests for revision or supplementary information.	Digital24	Global South thought leadership piece placed in international media.
Draft the El Salvador licence announcement media materials. Prepare a full media kit: Futura company backgrounder, Global South mission statement, El Salvador market overview, quotes approved by Futura for use in coverage, and a Q&A document.	Digital24	Full media kit ready for release on licence confirmation.
Social media content programme running. Two to three posts per week across LinkedIn and X. Mix of Global South positioning content, El Salvador regulatory and ecosystem commentary, and amplification of any international media placements.	Digital24	Consistent social media presence established. Engagement tracked.
Identify and approach the first podcast appearance opportunity. Target: an internationally distributed English-language podcast covering blockchain, fintech, or emerging markets. Angle: Futura's Global South infrastructure mission and the El Salvador licensing story.	Digital24	Podcast appearance confirmed or in final discussion.

Pakistan Plan Connection

The first international media placement produced in this track provides the Pakistan activities with a credibility reference for all regulatory and media outreach in L-2. Pakistani regulatory contacts introduced to Futura this month are briefed on the international coverage as evidence of Futura's global credibility.

Track 3: Media & Stakeholder Relations

Activity	Owner	Output / Deliverable
Initiate journalist briefings. Off-the-record introductions to primary international journalists, covering Futura's Global South story, the El Salvador licensing rationale, and the broader mission. The purpose is to warm key journalists before the licence announcement.	Digital24	Primary international journalists briefed off-the-record.
Assess the Bitcoin Beach and El Zonte community engagement opportunity. The El Zonte community is authentic, internationally followed. Digital24 assesses whether and how Futura should engage with this community given its Bitcoin maximalist character and the potential for ideological misalignment with a utility token company.	Digital24	El Zonte engagement assessment and recommendation delivered to Futura.
Monitor El Salvador media environment. Track any developments in El Salvador's regulatory framework, CNAD announcements, and broader digital asset news that could affect Futura's application or positioning. Provide Futura with a monthly media monitoring summary.	Digital24	L-2 El Salvador media monitoring summary delivered.

Track 4: Global South Amplification

Activity	Owner	Output / Deliverable
Social media programme activates. Futura's LinkedIn and X channels begin publishing. Two to three posts per week. Content covers the Global South infrastructure mission, the El Salvador licensing journey, and broader digital economy commentary.	Digital24	Social channels live. First content published. Engagement tracked.
First Global South thought leadership piece submitted to international media. Digital24 manages the submission, follows up with editors, and handles any editorial requests.	Digital24	First thought leadership piece placed.
Second Global South thought leadership piece drafted. Angle: the remittance opportunity and why blockchain infrastructure, not Bitcoin mandates, is the solution. Draws on El Salvador's experience as the world's most documented case study in national crypto adoption.	Digital24	Second thought leadership piece drafted and submitted for Futura approval.
Forum or event outreach initiated. Digital24 makes the approach and manages the scheduling conversation.	Digital24 / Futura	Forum and event outreach sent. Responses tracked.

Pakistan Plan Connection

The second Global South thought leadership piece is adapted for the Pakistani market as part of the Pakistan plan's Track 2 programme. The remittance angle is particularly relevant for Pakistani audiences and Pakistani financial media. Both versions draw from the same approved content library.

L-2: Priority Outputs
• Legal clearance gate resolved: public-facing communications programme activates
• CNAD application timeline tracked and current
• CNAD-facing company overview document delivered to Futura legal

• Journalist briefings initiated off-the-record
• Social media channels live and publishing
• First thought leadership piece submitted to international media
• Second thought leadership piece drafted and in approval
• Full licence announcement media kit ready
• First podcast appearance confirmed or in discussion
• El Zonte engagement assessment delivered
• Forum and event outreach initiated
• Pakistan reactivation begins with El Salvador credibility in place

L-1: CONSOLIDATION PHASE

One month before expected licence approval: full programme running, announcement ready, Pakistan Islamabad visit

L-1 is the most significant communications phase of the El Salvador programme. The CNAD licence is in its final stage or imminent, the global announcement is ready to activate, and Futura becomes a licensed, regulated digital asset operator. In Pakistan, the Islamabad visit happens during this phase. Futura arrives as a company with its licence either confirmed or days away from confirmation under the world's number one ranked digital asset regulatory framework. The two markets reach their combined strategic purpose: the Global South narrative is now a demonstrable reality.

Track 1: Regulatory & Licensing

Activity	Owner	Output / Deliverable
Coordinate the licence announcement moment with Futura's legal team. Digital24 activates the press release and media kit. The legal team confirms the announcement is clear to go. Digital24 executes the communications programme from that point.	Futura Legal / Digital24	Licence announced within 24 hours of legal confirmation. Full media programme activated.
Produce the post-licence communications calendar. Following the licence, Futura has ongoing quarterly reporting obligations to CNAD. Digital24 builds a simple communications calendar that maps these obligations alongside the communications programme, ensuring that nothing Futura says publicly contradicts or pre-empts what it is reporting to CNAD.	Digital24 / Futura Legal	Post-licence communications and compliance calendar produced. Shared with Futura legal team.
Support Futura legal in identifying how the CNAD relationship should be managed from a communications perspective in the months following the licence. Digital24's role is to ensure that any public statements, media appearances, or content referencing CNAD are consistent with the relationship Futura's legal and executive team is maintaining with the regulator.	Digital24	Post-licence CNAD communications protocol agreed with Futura.

Track 2: Narrative & Thought Leadership

Activity	Owner	Output / Deliverable
Licence announcement press release issued. Wire distribution to international media. Simultaneous distribution to all journalists briefed in L-3 and L-2.	Digital24	Press release issued and distributed globally.
International media announcement amplification. Within 24 hours of the press release, Digital24 amplifies across all channels: LinkedIn and X posts, direct follow-up with primary journalists offering interviews or additional background, and outreach to secondary media targets who were not briefed in advance.	Digital24	Full amplification complete. Coverage tracked and reported.
Podcast appearance delivered. The podcast confirmed in L-2 is recorded and aired this month. Angle: Futura's journey to becoming a licensed Global South infrastructure operator, what the CNAD licence means, and what comes next. This is the most important earned media moment of the three-month programme.	Digital24 / Futura	Podcast episode aired and amplified across all channels.
Third Global South thought leadership piece. With regulatory confirmation, Futura can speak with the authority of a licensed operator. This piece reflects on what the CNAD process taught the team, what a compliance-first approach actually requires in practice, and what it means for the markets Futura is building for.	Digital24	Third thought leadership piece placed in international media.
L-1 and full quarter PR monitoring report. Coverage volume, sentiment, reach, share of voice across English and Spanish-language media, social engagement, and a summary of the Global South narrative's reach beyond the two active markets. Delivered to Futura leadership.	Digital24	Quarterly PR monitoring report delivered.

Pakistan Plan Connection

The licence announcement and international media coverage produced in this track is the single most important credibility input for the Pakistan Islamabad visit happening simultaneously this month. Digital24 ensures Pakistani regulatory contacts receive the licence announcement directly, framed as a signal of Futura's seriousness and readiness to engage with governments that are building their own frameworks.

Track 3: Media & Stakeholder Relations

Activity	Owner	Output / Deliverable
Digital24 manages all inbound media enquiries, coordinates interviews between Futura and journalists, provides additional background and context as requested, and monitors coverage as it appears.	Digital24	All media enquiries responded to. Interview coordination complete. Coverage documented.
Assess broader El Salvador ecosystem engagement for subsequent phases. Following the licence announcement, assess which El Salvador stakeholders have shown interest in Futura, what engagement opportunities exist in the local ecosystem, and whether any partnership conversations are worth pursuing in the next phase of the programme.	Digital24	El Salvador ecosystem engagement assessment for the next phase of the programme delivered.

Track 4: Global South Amplification

Activity	Owner	Output / Deliverable
Licence announcement amplified across Global South channels. Beyond the international crypto media, the licence announcement is adapted and distributed to development-focused media, emerging market fintech publications, and the international forums tracking Global South digital economy development.	Digital24	Global South-specific amplification complete. Reach beyond crypto media documented.
Forum or event appearance delivered. Futura's representative presents on Global South digital infrastructure, using the El Salvador licence as the proof point and the Pakistan engagement as the demonstration of the collaborative model.	Digital24 / Futura	Event appearance complete. Content captured for amplification.
Second Global South thought leadership piece placed in international media. Angle: the remittance opportunity and why blockchain infrastructure, not Bitcoin mandates, is the solution. Drafted and approved in L-2.	Digital24	Second thought leadership piece placed in international media.
Global South content library review. Assess the body of content produced: thought leadership pieces, social content, press releases, and media coverage. Identify the strongest assets, ensure they are organised and accessible, and confirm which content serves the Pakistan plan going forward.	Digital24	Content library reviewed. Assets catalogued. Pakistan plan content confirmed.

Pakistan Plan Connection

The forum appearance and the content library review this month directly inform the Pakistan plan's next phase of the programme content strategy. The El Salvador licence story, the Global South positioning content, and the international media coverage all become reference assets for the Pakistan narrative as it scales from Month 4 onwards.

L-1: Priority Outputs
• Licence announcement activated within 24 hours of Futura legal confirmation
• Full international media amplification complete
• Post-licence communications and compliance calendar produced
• Post-licence CNAD communications protocol agreed
• Podcast episode aired and amplified
• Third Global South thought leadership piece placed
• Licence announcement sent directly to Pakistani regulatory contacts
• Forum or event appearance delivered
• Global South content library reviewed and catalogued
• Quarterly PR monitoring report delivered across both markets
